Continuation of 11. does NOT place the application in condition for allowance because: On page 8, 1st paragraph of Remark, Applicant's stated that Nagai does not disclose or suggest "an RGB mixer for receiving RGB video data, and selecting data as a specific combination of the RGB video data" as recited in independent Claims. However, Nagai teaches an RGB mixer for receiving the RGB video data, selecting data as a specific combination of the RGB video data, and outputting the selected data to the subfield data generator (fig. 1A, items 14-15, col. 9, lines 36-47).

Notice, that absent clearly definition in the claims, any combination of the RGB video data is specific, including sets of RGB video data.

On page 8, 2-4 paragraphs of Remark, Applicant's stated that The RGB mixer 110 receives the RGB video data from the FIFO memories 101, 103, and 105, selects two sets of them according to an RGB mixing algorithm, and outputs them as 8-bit video data to the subfield datagenerators 121 and 123, respectively.

\*\*\* By using the above-described RGB mixing algorithm, three RGB component video data outputs are processed by the two subfield data generators 121 and 123.

The subfield data generators 121 and 123 respectively receive the two sets of video data output from the RGB mixer 110, that is, the upper video data and the lower video data, generate subfield data for representing gray corresponding to the respective video data, and output the subfield data. However, in response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., FIFO memories and two sets of data) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
